Elbow(s)

Critical Indicators of Injuries to Elbow(s)

IMPORTANT: Any mention of pain, injury, or conditions specifically affecting the elbow should automatically be classified under "Elbow(s)". These indicators point to injuries or conditions affecting the elbow joint, ligaments, or surrounding soft tissues.

Keywords and Phrases:

- "Elbow pain"
- "Injured elbow"
- "Elbow fracture"
- "Elbow sprain"
- "Elbow dislocation"
- "Swollen elbow"
- "Bruised elbow"
- "Elbow strain"

Contextual Indicators:

- Incidents where the worker describes direct trauma to the elbow.
- Situations where the worker reports falling onto or hitting the elbow against something.
- Descriptions of immediate pain, swelling, or bruising in the elbow area following an incident.

Example 1: "I slipped on a wet floor and landed on my elbow, which is now swollen and painful."

- **Injury Body Part:** Elbow(s)
- **Why this label?** Because the text explicitly mentions "landed on my elbow," "swollen," and "painful," which are clear indicators of an elbow injury. This distinguishes it from injuries to other arm regions, such as the wrist or shoulder.

Example 2: "While lifting a heavy box, I felt a sharp pain in my right elbow."

- **Injury Body Part:** Elbow(s)
 - **Why this label?** The description specifies "sharp pain in my right elbow," indicating a specific injury to the elbow joint, not the arm as a whole or other nearby joints like the shoulder.
-

Wrist(s)

Critical Indicators of Wrist Injuries

IMPORTANT: Any mention of pain, injury, or conditions specifically affecting the wrist should automatically be classified under "Wrist(s)". These indicators point to injuries or conditions affecting the carpal bones, ligaments, or soft tissues of the wrist.

Keywords and Phrases:

- "Wrist pain"
- "Injured wrist"
- "Broken wrist"
- "Wrist sprain"
- "Wrist fracture"
- "Wrist dislocation"
- "Swollen wrist"
- "Bruised wrist"
- "Wrist discomfort"

Contextual Indicators:

- Incidents where the worker describes direct trauma to the wrist.
- Situations where the worker reports falling onto an outstretched hand, twisting the wrist, or similar incidents.
- Descriptions of immediate pain, swelling, or bruising in the wrist area following an incident.

Example 1: "I slipped and fell, landing on my hand, which caused my wrist to swell and hurt."

- **Injury Body Part:** Wrist(s)
- **Why this label?** Because the text explicitly mentions "landing on my hand," leading to "wrist" "swelling" and "pain," which are clear indicators of a wrist injury.

Example 2: "While lifting a heavy box, I twisted my wrist and now it's painful and swollen."

- **Injury Body Part:** Wrist(s)
- **Why this label?** Because the incident involves "twisting my wrist," followed by "pain" and "swelling," indicating an injury specifically to the wrist.
