## External Eye

### Critical Indicators of External Eye Injuries

IMPORTANT: Any mention of vision impairment, eye pain, or exposure to harmful substances directly impacting the eyes should automatically be classified under "External Eye". These indicators point to injuries or conditions affecting the outer structures of the eye, such as the cornea, conjunctiva, or eyelids.

#### Keywords and Phrases:

- "Vision loss"
- "Blurry vision"
- "Eye pain"
- "Eye injury"
- "Foreign object in eye"
- "Chemical splash in eye"
- "Scratched cornea"
- "Redness/swelling of the eye"
- "Eye irritation"
- "Hit in the eye"

#### Contextual Indicators:

- Incidents where the worker describes direct trauma to the eye (e.g., struck by an object).
- Situations where the worker reports exposure to chemicals, dust, or other harmful substances affecting the eye.
- Descriptions of immediate vision changes or pain following an incident.

**Example 1:** "While cutting metal, a small piece flew into my eye, causing severe pain and blurry vision."

- **Injury Body Part:** External Eye
- **Why this label?** Because the text explicitly mentions a "small piece flew into my eye," "severe pain," and "blurry vision," which are clear indicators of an external eye injury.

**Example 2:** "I accidentally splashed cleaning chemicals into my eyes, and now they are red and swollen."

- **Injury Body Part:** External Eye
- **Why this label?** Because the incident involves a "chemical splash" and symptoms like "red and swollen" eyes, directly affecting the external structures of the eye.
